

Beazley Security Goes Live – with market leading Managed eXtended Detection and Response platform

June 25, 2024

Integrated cyber risk and incident management services firm launches with extensive service offering which includes Managed eXtended Detection & Response

June 25, 2024 – West Hartford, CT – Beazley Security today went live as an integrated cyber risk management company, following the merger, announced in February 2024, of leading specialist insurer Beazley’s in-house cyber services team and its wholly owned cyber security company, Lodestone.

Beazley Security launched with an expanded portfolio of services, including a new Managed eXtended Detection & Response (MXDR) service that offers clients always-on monitoring and advanced capabilities to rapidly identify and contain threats. Other core offerings include a robust line up of professional services to help clients prepare for and defend against cyber risks, as well as incident response, forensics, and restoration services should a client suffer an attack. All of Beazley Security’s services are delivered by seasoned cyber security professionals.

With a newly expanded roster of staff and clients in the USA, Canada, UK, Germany, France, Spain, and Singapore, Beazley Security is well-positioned to provide specialized services to Beazley policyholders, while also driving organic growth outside of the Beazley client community.

“The combined power of expertise at Beazley Security will deliver long-term outperformance for our clients, enabling them to build the kind of cyber resilience which is vital in an era of accelerating cyber risk,” said

Paul Bantick, Global Head of Cyber Risks at Beazley. “Our experience of managing thousands of cyber incidents shows that organizations with integrated risk management services in place, build stronger resilience and are able to pre-empt, respond and adapt to cyber threats more effectively.”

“As a new type of cyber risk management company, we have spent the last year building the teams, tools, and proprietary technology needed to help clients proactively identify and address cyber threats. Should an event occur, our focus is on helping clients minimize damage and speed recovery,” said Alton Kizziah, CEO of Beazley Security. “We are continually evolving and developing our services to meet the ever-changing cyber threat, and innovations, such as MXDR, are part of a powerful suite of capabilities that quickly identify and contain threats.”
